Paired alpha/flux relaxation maps
Fixed physical time t = 0.493844492237 s; 16 same-time sweeps, not a transient
Pressure update
max |Δp| per sweep (Pa)
ω = 1
ω = 0.5
Unrelaxed stock MULES candidate changes
candidate change / sweep 1
ω = 1, unrelaxed α̂
ω = 0.5, unrelaxed α̂
ω = 1, unrelaxed F̂
ω = 0.5, unrelaxed F̂
Phase continuity residuals
post-EOS continuity L1 (kg/s)
ω = 1, water
ω = 0.5, water
ω = 1, gas
ω = 0.5, gas
Diagnostic sweep at fixed physical time
The relaxed map damps pressure and candidate updates; phase continuity remains a separate convergence check.
